Replace the 'Load the data' section in crime.py with the following code:

```python
import mysql.connector

# Define a function to load training data from the database
def load_training_data_from_database():
    try:
        connection = mysql.connector.connect(
            host='localhost',
            user='your_user',
            password='your_password',
            database='your_database'
        )

        cursor = connection.cursor()
        cursor.execute('SELECT * FROM training_data')
        data = cursor.fetchall()

        connection.close()

        return data

    except Exception as e:
```

```python
        print("Error loading training data from the database:", str(e))
        return None

# Load training data
training_data = load_training_data_from_database()

# Make sure to replace 'your_user', 'your_password', and 'your_database' with your actual database credentials.
```
